

Package: shinyGovstyle (via r-universe)

December 12, 2024

Title Custom Gov Style Inputs for Shiny

Version 0.1.0.9000

Description Collection of 'shiny' application styling that are the based on the GOV.UK Design System. See <https://design-system.service.gov.uk/components/> for details.

License GPL (>= 3)

URL <https://github.com/moj-analytical-services/shinyGovstyle>

BugReports <https://github.com/moj-analytical-services/shinyGovstyle/issues>

Depends R (>= 3.5)

Imports htmltools, jsonlite, magrittr, purrr, shiny (>= 0.14), shinyjs, stringr

Suggests testthat, shinytest2

Encoding UTF-8

RoxygenNote 7.3.2

LazyData true

Config/pak/sysreqs make libicu-dev zlib1g-dev

accordion

Accordion Function

Description

This function inserts a accordion

Usage

accordion(inputId, titles, descriptions)

Arguments

inputId	Input id for the accordion
titles	Add the titles for the accordion
descriptions	Add the main text for the accordion

Value

an accordion html shiny object

Examples

```
if (interactive()) {  
  
  ui <- fluidPage(  
    shinyGovstyle::header(  
      main_text = "Example",  
      secondary_text = "User Examples",  
      logo="shinyGovstyle/images/moj_logo.png"),  
    shinyGovstyle::banner(  
      inputId = "banner", type = "beta", 'This is a new service'),  
    shinyGovstyle::gov_layout(size = "two-thirds",  
    accordion(  
      "acc1",  
      c("Writing well for the web",  
        "Writing well for specialists",  
        "Know your audience",  
        "How people read"  
      ),  
      c("This is the content for Writing well for the web.",  
        "This is the content for Writing well for specialists.",  
        "This is the content for Know your audience.",  
        "This is the content for How people read."  
      )),  
    shinyGovstyle::footer(full = TRUE)  
  )  
  
  server <- function(input, output, session) {}  
  
  shinyApp(ui = ui, server = server)  
}
```

backlink_Input

Back Link Function

Description

This function adds a back link to the page

Usage

```
backlink_Input(inputId, label = "Back")
```

Arguments

inputId	The input slot that will be used to access the value.
label	The link text for the backlink, default is "Back"

Value

a backlink html shiny object

Examples

```
if (interactive()) {
  ui <- fluidPage(
    header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shiny::navlistPanel(
      "",
      id="nav",
      widths = c(2, 10),
      well = FALSE,

      #Create first panel
      shiny::tabPanel(
        "Select Types",
        value = "panel1",
        gov_layout(size = "two-thirds",
          backlink_Input("link1"),
          shiny::tags$br(), shiny::tags$br()
        )),
      shiny::tabPanel(
        "Tab2",
        value = "panel2")),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {
    #Slightly confused in that it goes forward rather than back, but shows how
    #to use
    observeEvent(input$link1,{
      updateTabsetPanel(session, "nav", selected = "panel2")
    })
  }
  shinyApp(ui = ui, server = server)
}
```

bad_link_text	<i>Lookup for bad link text</i>
---------------	---------------------------------

Description

A single column data frame, listing out known examples of bad link text that check for in the 'external_link()' function.

Usage

```
bad_link_text
```

Format

```
## 'bad_link_text' A data frame with 53 rows and 1 columns:
```

```
bad_link_text Lower cased examples of non-descriptive link text
```

Details

We've started curating this list so we can create automated checks to help all link text to be as descriptive as possible in line with [WCAG 2.2 success criteria 2.4.4: Link Purpose (In Context)](<https://www.w3.org/WAI/WCAG22/Understanding/link-purpose-in-context>).

Source

Curated by explore.statistics@education.gov.uk

banner	<i>Banner Function</i>
--------	------------------------

Description

This function create a detail component that you can click for further details.

Usage

```
banner(inputId, type, label)
```

Arguments

inputId	The input slot that will be used to access the value.
type	Main type of label e.g. alpha or beta. Can be any word.
label	test to display.

Value

a banner html shiny object

Examples

```
if (interactive()) {  
  
  ui <- fluidPage(  
    shinyGovstyle::header(  
      main_text = "Example",  
      secondary_text = "User Examples",  
      logo="shinyGovstyle/images/moj_logo.png"),  
    shinyGovstyle::banner(  
      inputId = "banner", type = "Beta", 'This is a new service')  
  )  
  
  server <- function(input, output, session) {}  
  
  shinyApp(ui = ui, server = server)  
}
```

button_Input

Button Function

Description

This function create a gov style button

Usage

```
button_Input(inputId, label, type = "default")
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
type	The type of button. Options are default, start, secondary and warning. Defaults to default.

Value

a html button shiny object

Examples

```
if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::button_Input(
        inputId = "btn1",
        label = "Continue",
        type = "default")
    ),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}
```

checkbox_Input

Checkbox Function

Description

This function inserts a checkbox group

Usage

```
checkbox_Input(
  inputId,
  cb_labels,
  checkboxIds,
  label,
  hint_label = NULL,
  small = FALSE,
  error = FALSE,
  error_message = NULL
)
```

Arguments

inputId	Input id for the group of checkboxes
cb_labels	Add the names of the options that will appear
checkboxIds	Add the values for each checkbox
label	Insert the text for the checkbox group.
hint_label	Insert optional hint/secondary text. Defaults to NULL

small change the sizing to a small version of the checkbox. Defaults to FALSE
 error Whenever you want to include error handle on the component.
 error_message If you want a default error message.

Value

a checkbox html shiny object

Examples

```

if (interactive()) {

  ui <- fluidPage(
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      # Simple checkbox
      shinyGovstyle::checkbox_Input(
        inputId = "check1",
        cb_labels = c("Option 1", "Option 2", "Option 3"),
        checkboxIds = c("op1", "op2", "op3"),
        label = "Choice option"),
      # Error checkbox
      shinyGovstyle::checkbox_Input(
        inputId = "check2",
        cb_labels = c("Option 1", "Option 2", "Option 3"),
        checkboxIds = c("op1", "op2", "op3"),
        label = "Choice option",
        hint_label = "Select the best fit",
        error = TRUE,
        error_message = "Select one"),
      # Button to trigger error
      shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
    ),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {
    #'Trigger error on blank submit of eventId2
    observeEvent(input$submit, {
      if (is.null(input$check2)){
        shinyGovstyle::error_on(inputId = "check2")
      } else {
        shinyGovstyle::error_off(inputId = "check2")
      }
    })
  })
}

```

```

    }

    shinyApp(ui = ui, server = server)
  }

```

contents_link	<i>Contents link function</i>
---------------	-------------------------------

Description

This function creates an action link to nav between tabs and optionally link to subcontents headers.

Usage

```
contents_link(link_text, input_id, subcontents_text_list, subcontents_id_list)
```

Arguments

link_text	vector of link text for contents
input_id	contents button id
subcontents_text_list	vector of link text for subcontents
subcontents_id_list	vector of link ids for subcontents. if missing automatically matches to id in shinygovstyle::heading_text

Value

an action button html shiny object

Examples

```

if (interactive()) {
  ui <- shiny::fluidPage(
    title="ShinyGovstyle",
    cookieBanner("Run Example"),
    header("MOJ", "ShinyGovstyle Example",
      logo="shinyGovstyle/images/moj_logo-1.png", logo_width = 66),
    banner(
      "banner",
      "Beta",
      'This is a new service \u002D your <a class="govuk-link" href="#">
        feedback</a> will help us to improve it. '),
    #Need this to make the error and word count work
    shinyjs::useShinyjs(),
    #Add a message to show users how to see this code
    shiny::tags$br(),

```

```

shiny::markdown(
  "Run ```View(run_example)``` in console to see the code for this app"),

gov_row(
  # Nav columns
  shiny::column(

    width = 3,
    id = "nav", # DO NOT REMOVE ID

    # Contents box
    shiny::tags$div(
      id = "govuk-contents-box", #DO NOT REMOVE ID
      class = "govuk-contents-box", #DO NOT REMOVE CLASS

      shiny::tags$h2("Contents"),

      # Text types tab
      contents_link(
        "Text Types",
        "text_types_button",
        subcontents_text_list = c("date_Input",
          "text_Input",
          "text_area_Input",
          "button_Input"),
        subcontents_id_list = c(NA, NA, NA, "button_input_text_types")
      ),

      # Tables tabs and accordions tab
      contents_link(
        "Tables, tabs and accordions",
        "tables_tabs_and_accordions_button",
        subcontents_text_list = c("govTable", "govTabs", "accordions", "button_Input"),
        subcontents_id_list = c(NA, NA, NA, "button_input_tables_tabs_accordions")
      ),

      contents_link(
        "Cookies",
        "cookies_button"),

    )
  ),

  shiny::column( width = 9,

    id = "main_col", # DO NOT REMOVE ID

    #Set up a nav panel so everything not on single page
    shiny::tabsetPanel(
      type = "hidden",

```

```

id = "tab-container", # DO NOT REMOVE ID

shiny::tabPanel(
  "Text Types",
  value = "text_types",
  gov_layout(
    size = "two-thirds",
    backlink_Input("back1"),
    heading_text("Page 2", size = "l"),

  })
}

```

```

    })
  }

  shiny::shinyApp(ui = ui, server = server)
}

```

 cookieBanner

Cookie Banner Function

Description

This function creates a cookie banner. You need to have `shinyjs::useShinyjs()` enabled to work. All the ids are pre set. See example for how to structure.

Usage

```
cookieBanner(service_name)
```

Arguments

`service_name` Name for this service to add to banner

Value

a cookie banner html shiny object.

Examples

```

if (interactive()) {
ui <- fluidPage(
  shinyGovstyle::header(
    main_text = "Example",
    secondary_text = "User Examples",
    logo="shinyGovstyle/images/moj_logo.png"),
  #Needs shinyjs to work
  shinyjs::useShinyjs(),
  shinyGovstyle::cookieBanner("The best thing"),
  shinyGovstyle::gov_layout(size = "two-thirds"),
  shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {

  #Need these set of observeEvent to create a path through the cookie banner
  observeEvent(input$cookieAccept, {
    shinyjs::show(id = "cookieAcceptDiv")
    shinyjs::hide(id = "cookieMain")
  })
}

```

```

observeEvent(input$cookieReject, {
  shinyjs::show(id = "cookieRejectDiv")
  shinyjs::hide(id = "cookieMain")
})

observeEvent(input$hideAccept, {
  shinyjs::toggle(id = "cookieDiv")
})

observeEvent(input$hideReject, {
  shinyjs::toggle(id = "cookieDiv")
})

observeEvent(input$cookieLink, {
  #Need to link here to where further info is located. You can use
  #updateTabsetPanel to have a cookie page for instance
})

}
shinyApp(ui = ui, server = server)
}

```

date_Input

Date Input Function

Description

This function create a date input that follows GDS component

Usage

```

date_Input(
  inputId,
  label,
  hint_label = NULL,
  error = FALSE,
  error_message = NULL,
  day = NULL,
  month = NULL,
  year = NULL
)

```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
hint_label	Display hint label for the control, or NULL for no hint label.
error	Whenever to include error components.Defaults to FALSE.

error_message	Error handling message? Defaults to NULL
day	Select a default day on start up. Defaults to NULL
month	Select a default month on start up. Defaults to NULL
year	Select a default year on start up. Defaults to NULL

Value

a data input html shiny object

Examples

```

if (interactive()) {

  ui <- fluidPage(
    # Required for error handling function.
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      # Simple date input
      shinyGovstyle::date_Input(
        inputId = "dob_input",
        label = "Please enter your birthday"),
      # Error date input
      shinyGovstyle::date_Input(
        inputId = "dob_input2",
        label = "Please enter your birthday",
        hint_label = "For example, 12 11 2007",
        error = TRUE),
      # Button to trigger error
      shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
    ),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {
    #'Trigger error on blank submit of dob_input2
    observeEvent(input$submit, {
      if (input$dob_input2 == ""){
        shinyGovstyle::error_on(inputId = "dob_input2")
      } else {
        shinyGovstyle::error_off(
          inputId = "dob_input2")
      }
    })
  }
  shinyApp(ui = ui, server = server)
}

```

details

Details Function

Description

This function create a detail component that you can click for further details.

Usage

```
details(inputId, label, help_text)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Main label text
help_text	Additional help information in the component.

Value

a details box html shiny object

Examples

```
if (interactive()) {  
  ui <- fluidPage(  
    shinyGovstyle::header(  
      main_text = "Example",  
      secondary_text = "User Examples",  
      logo="shinyGovstyle/images/moj_logo.png"),  
    shinyGovstyle::gov_layout(size = "two-thirds",  
      shinyGovstyle::details(  
        inputId = "help_div",  
        label = "Help with form",  
        help_text = "To complete the form you need to fill it in...")  
      ),  
    shinyGovstyle::footer(full = TRUE)  
  )  
}  
  
server <- function(input, output, session) {}  
shinyApp(ui = ui, server = server)  
}
```

error_off	<i>Error off Function</i>
-----------	---------------------------

Description

This function turns off the the error o the component, once issues have been sorted.

Usage

```
error_off(inputId)
```

Arguments

inputId The inputId to turn error handling iff for on for.

Value

no return value. This toggles off error css

Examples

```
## Only run examples in interactive R sessions
if (interactive()) {

  ui <- fluidPage(
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      # Error text box
      shinyGovstyle::text_Input(
        inputId = "eventId",
        label = "Event Name",
        error = TRUE),
      # Button to trigger error
      shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
    ),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {
    #Trigger error on blank submit of eventId2
    observeEvent(input$submit, {
      if (input$eventId != ""){
```

```

    shinyGovstyle::error_off(inputId = "eventId")
  } else {
    shinyGovstyle::error_on(
      inputId = "eventId",
      error_message = "Please complete")
  }
})
}

# Run the application
shinyApp(ui = ui, server = server)
}

```

error_on

Error on Function

Description

This function turns on the the error o the component. Can be used to validate inputs.

Usage

```
error_on(inputId, error_message = NULL)
```

Arguments

inputId The input id that you to to turn the error on for.

error_message if you want to add an additional error message. Defaults to NULL, showing the original designed error message

Value

no return value. This toggles on error css

Examples

```

## Only run examples in interactive R sessions
if (interactive()) {

  ui <- fluidPage(
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",

```

```

# Error text box
shinyGovstyle::text_Input(
  inputId = "eventId",
  label = "Event Name",
  error = TRUE),
# Button to trigger error
shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
),
shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {
  #Trigger error on blank submit of eventId2
  observeEvent(input$submit, {
    if (input$eventId != ""){
      shinyGovstyle::error_off(inputId = "eventId")
    } else {
      shinyGovstyle::error_on(
        inputId = "eventId",
        error_message = "Please complete")
    }
  })
}

# Run the application
shinyApp(ui = ui, server = server)
}

```

error_summary

Error Summary Function

Description

This function loads the error summary component to display error text. This replicates the gov style error boxes linked below: <https://design-system.service.gov.uk/components/error-summary/>

Usage

```
error_summary(inputId, error_title, error_list)
```

Arguments

inputId	The input slot that will be used to access the value.
error_title	The title for the error summary.
error_list	A list of text values to be displayed in the error body.

Value

an error_summary html shiny object

Examples

```

if (interactive()) {
  ui <- fluidPage(
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo = "shinyGovstyle/images/moj_logo.png"
    ),
    shinyGovstyle::gov_layout(
      size = "two-thirds",
      error_summary(
        inputId = "errorId",
        error_title = "Error title",
        error_list = c("error item1", "error item2")
      )
    ),
    shinyGovstyle::button_Input("btn1", "Change error summary"),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {

    shiny::observeEvent(input$btn1, {
      error_summary_update(
        "errorId",
        c("error item1", "error item2", "error item3")
      ),
      ignoreInit = TRUE
    })
  }
  shinyApp(ui = ui, server = server)
}

```

error_summary_update *Error Summary Update Function*

Description

This function changes the text that displays in the error summary box. Requires shinyjs::useShinyjs() to work.

Usage

```
error_summary_update(inputId, error_list)
```

Arguments

inputId	The inputid of the error summary you want to update
error_list	An updated list of text values to be displayed in the error body.

Value

an update error summary box

Examples

```

if (interactive()) {
  ui <- fluidPage(
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo = "shinyGovstyle/images/moj_logo.png"
    ),
    shinyGovstyle::gov_layout(
      size = "two-thirds",
      error_summary(
        inputId = "errorId",
        error_title = "Error title",
        error_list = c("error item1", "error item2")
      )
    ),
    shinyGovstyle::button_Input("btn1", "Change error summary"),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {

    shiny::observeEvent(input$btn1, {
      error_summary_update(
        "errorId",
        c("error item1", "error item2", "error item3")
      )},
      ignoreInit = TRUE
    )
  }
  shinyApp(ui = ui, server = server)
}

```

external_link

External link

Description

It is commonplace for external links to open in a new tab, and when we do this we should be careful...

This function automatically adds the following to your link: * 'target="_blank"' to open in new tab * 'rel="noopener noreferrer"' to prevent [reverse tabnabbing](https://owasp.org/www-community/attacks/Reverse_Tabnabbing)

By default this function also adds "(opens in new tab)" to your link text to warn users of the behaviour.

This also adds "This link opens in a new tab" as a visually hidden span element within the HTML outputted to warn non-visual users of the behaviour.

The function will error if you end with a full stop, give a warning for particularly short link text and will automatically trim any leading or trailing white space inputted into `link_text`.

If you are displaying lots of links together and want to save space by avoiding repeating (opens in new tab), then you can set `add_warning = FALSE` and add a line of text above all of the links saying something like 'The following links open in a new tab'.

Related links and guidance:

- * [Government digital services guidelines on the use of links](<https://design-system.service.gov.uk/styles/links/>)
- * [Anchor tag HTML element and its properties](<https://developer.mozilla.org/en-US/docs/Web/HTML/Element/a>)
- * [WCAG 2.2 success criteria 2.4.4: Link Purpose (In Context)](<https://www.w3.org/WAI/WCAG22/Understanding/link-purpose-in-context>)
- * [Web Accessibility standards link text behaviour](<https://www.w3.org/TR/WCAG20-TECHS/G200.html>)

Usage

```
external_link(href, link_text, add_warning = TRUE)
```

Arguments

<code>href</code>	URL that you want the link to point to
<code>link_text</code>	Text that will appear describing your link, must be descriptive of the page you are linking to. Vague text like 'click here' or 'here' will cause an error, as will ending in a full stop. Leading and trailing white space will be automatically trimmed. If the string is shorter than 7 characters a console warning will be thrown. There is no way to hush this other than providing more detail.
<code>add_warning</code>	Boolean for adding "(opens in new tab)" at the end of the link text to warn users of the behaviour. Be careful and consider accessibility before removing the visual warning.

Details

Intentionally basic wrapper for HTML anchor elements making it easier to create safe external links with standard and accessible behaviour. For more information on how the tag is generated, see [tags](#).

Value

shiny.tag object

Examples

```
external_link("https://shiny.posit.co/", "R Shiny")
```

```
external_link(
  "https://shiny.posit.co/",
  "R Shiny",
```

```
    add_warning = FALSE
  )

  # This will trim and show as 'R Shiny'
  external_link("https://shiny.posit.co/", " R Shiny")

  # Example of within text
  shiny::tags$p(
    "Oi, ", external_link("https://shiny.posit.co/", "R Shiny"), " is great."
  )

  # Example of multiple links together
  shiny::tags$h2("Related resources")
  shiny::tags$p("The following links open in a new tab.")
  shiny::tags$ul(
    shiny::tags$li(
      external_link(
        "https://shiny.posit.co/",
        "R Shiny documentation",
        add_warning = FALSE
      )
    ),
    shiny::tags$li(
      external_link(
        "https://www.python.org/",
        "Python documentation",
        add_warning = FALSE
      )
    ),
    shiny::tags$li(
      external_link(
        "https://nextjs.org/",
        "Next.js documentation",
        add_warning = FALSE
      )
    )
  )
)
```

file_Input

File Input Function

Description

This function create a file upload component. It uses the basis of the shiny fileInput function, but restyles the label and adds error onto it. It doesn't look like the www.gov.uk/ style one, although this www.gov.uk/ doesn't seem to have a settle style as, for example it changes between Firefox and Chrome

Usage

```
file_Input(
  inputId,
  label,
  multiple = FALSE,
  accept = NULL,
  width = NULL,
  buttonLabel = "Choose file",
  placeholder = "No file chosen",
  error = FALSE,
  error_message = NULL
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
multiple	Whether the user should be allowed to select and upload multiple files at once. Does not work on older browsers, including Internet Explorer 9 and earlier.
accept	A character vector of MIME types; gives the browser a hint of what kind of files the server is expecting.
width	The width of the input, e.g. '400px', or '100%'
buttonLabel	The label used on the button. Can be text or an HTML tag object.
placeholder	The text to show before a file has been uploaded.
error	Whenever to include error handling Defaults to FALSE.
error_message	Message to display on error. Defaults to NULL

Value

a file input html shiny object

Examples

```
if (interactive()) {
  ui <- fluidPage(
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      # Simple file input
      shinyGovstyle::file_Input(inputId = "file1", label = "Upload a file"),
      # Error file
```

```

    shinyGovstyle::file_Input(
      inputId = "file2",
      label = "Upload a file",
      error = TRUE),
    # Button to trigger error
    shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
  ),
  shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {
  #'Trigger error on blank submit of file2
  observeEvent(input$submit, {
    if (is.null(input$file2)){
      shinyGovstyle::error_on(inputId = "file2")
    } else {
      shinyGovstyle::error_off(
        inputId = "file2")
    }
  })
}
shinyApp(ui = ui, server = server)
}

```

font

*Font Function***Description**

This function adds rge nta fonts to the app. See <https://design-system.service.gov.uk/styles/typography/> for when they are allowed.

Usage

```
font()
```

Value

no value returned. This loads the font css file

Examples

```

if (interactive()) {

  ui <- fluidPage(
    font(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png")
  )
}

```

```
)  
server <- function(input, output, session) {}  
shinyApp(ui = ui, server = server)  
}
```

footer

Footer Function

Description

This function create a gov style footer for your page

Usage

```
footer(full = FALSE)
```

Arguments

full Whenever you want to have blank footer or official gov version. Defaults to FALSE

Value

a footer html shiny object

Examples

```
if (interactive()) {  
  ui <- fluidPage(  
    shinyGovstyle::header(  
      main_text = "Example",  
      secondary_text = "User Examples",  
      logo="shinyGovstyle/images/moj_logo.png"),  
    shinyGovstyle::banner(  
      inputId = "banner", type = "beta", 'This is a new service'),  
    tags$br(),  
    tags$br(),  
    shinyGovstyle::footer(full = TRUE)  
  )  
  server <- function(input, output, session) {}  
  shinyApp(ui = ui, server = server)  
}
```

govTable	<i>Table Function</i>
----------	-----------------------

Description

This function inserts a gov styled table. Format is with header looking rows and columns

Usage

```
govTable(
  inputId,
  df,
  caption,
  caption_size = "l",
  num_col = NULL,
  width_overwrite = NULL
)
```

Arguments

inputId	Input id for the table
df	expects a dataframe to create a table
caption	adds a caption to the table as a header
caption_size	adjust the size of caption. Options are s, m, l, xl, with l as the default
num_col	adds numeric class format to these columns.
width_overwrite	change width. Need to include width for every column. Options are three-quarters, two-thirds, one-half, one-third, one-quarter. Default is NULL.

Value

an table html shiny object

Examples

```
if (interactive()) {

  Months <- c("January", "February", "March")
  Bikes <- c("£85", "£75", "£165")
  Cars <- c("£95", "£55", "£125")

  example_data <- data.frame(Months, Bikes, Cars)

  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
```

```

    logo="shinyGovstyle/images/moj_logo.png"),
  shinyGovstyle::banner(
    inputId = "banner", type = "beta", 'This is a new service'),
  shinyGovstyle::gov_layout(size = "two-thirds",
  shinyGovstyle::govTable(
    "tab1", example_data, "Test", "1", num_col = c(2,3),
    width_overwrite = c("one-half", "one-quarter", "one-quarter"))
  ),

  shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {}

shinyApp(ui = ui, server = server)
}

```

govTabs

Tabs Function

Description

This function creates a tabs based table. It requires a single dataframe with a grouping variable

Usage

```
govTabs(inputId, df, group_col)
```

Arguments

inputId	The id to access the tag
df	A single dataframe with all data. See example for structure.
group_col	The column name with the groups to be used as tabs

Value

a tab table html shiny object.

Examples

```

if (interactive()) {

  # Create an example dataset
  tabs <- c(rep("Past Day", 3),
            rep("Past Week", 3),
            rep("Past Month", 3),
            rep("Past Year", 3))
  Case_manager <- rep(c("David Francis", "Paul Farmer", "Rita Patel"),4)
  Cases_open <- c(3, 1, 2, 24, 16, 24, 98, 122, 126, 1380, 1129, 1539)
}

```

```

Cases_closed <- c(0, 0, 0, 18, 20, 27, 95, 131, 142, 1472, 1083, 1265)
data <- data.frame(tabs, Case_manager, Cases_open, Cases_closed)

ui <- fluidPage(
  shinyGovstyle::header(
    main_text = "Example",
    secondary_text = "User Examples",
    logo="shinyGovstyle/images/moj_logo.png"),
  shinyGovstyle::gov_layout(size = "two-thirds",
    shinyGovstyle::govTabs(data, "tabs")),
  shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {}
shinyApp(ui = ui, server = server)
}

```

gov_layout

Page Layout Function

Description

This function loads the page layout, This doesn't work as well as the 'gov_main_layout' and associated functions. This is being kept for now as a simpler version where grids are not needed.

Usage

```
gov_layout(..., inputID = "main", size = "full")
```

Arguments

...	include the components of the UI that you want within the main page.
inputID	ID of the main div. Defaults to "main"
size	Layout of the page. Optional are full, one-half, two-thirds, one-third and one-quarter. Defaults to "full"

Value

a html shiny layout div

Examples

```

if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "full",

```

```

    shinyGovstyle::panel_output(
      inputId = "panel1",
      main_text = "Application Complete",
      sub_text = "Thank you for submitting your application.
Your reference is xvsiq")
    ),
    shinyGovstyle::footer(full = TRUE)
  )

server <- function(input, output, session) {}
shinyApp(ui = ui, server = server)
}

```

gov_summary

Tabs Function

Description

This function creates a tabs based table. It requires a single dataframe with a grouping variable

Usage

```
gov_summary(inputId, headers, info, action = FALSE, border = TRUE)
```

Arguments

inputId	The id to access the summary list
headers	input for the row headers value
info	summary information values for the table
action	whenever a change link is needed. sets input to the value of the headers using lowercase and with underscore to replace gaps. Default set to FALSE
border	set if the table should have borders. Default set to TRUE

Value

a summary list table html shiny object.

Examples

```

if (interactive()) {

  # Create an example dataset
  headers <- c("Name", "Date of birth", "Contact information", "Contact details")
  info <- c(
    "Sarah Philips",
    "5 January 1978",
    "72 Guild Street <br> London <br> SE23 6FH",
    "07700 900457 <br> sarah.phillips@example.com")
}

```

```

ui <- fluidPage(
  shinyGovstyle::header(
    main_text = "Example",
    secondary_text = "User Examples",
    logo="shinyGovstyle/images/moj_logo.png"),
  shinyGovstyle::gov_layout(size = "two-thirds",
    shinyGovstyle::gov_summary("sumID", headers, info, action = FALSE)),
  shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {}
shinyApp(ui = ui, server = server)
}

```

header

Header Function

Description

This function create a header banner. For use at top of the screen

Usage

```

header(
  main_text,
  secondary_text,
  logo = NULL,
  main_link = "#",
  secondary_link = "#",
  logo_width = 36,
  logo_height = 32
)

```

Arguments

main_text	Main text that goes in the header
secondary_text	Secondary header to supplement the main text
logo	Add a link to a logo which will apply in the header. Use crown to use the crown svg version on gov uk.
main_link	Add a link for clicking on main text
secondary_link	Add a link for clicking on secondary header.
logo_width	Change the logo size width css to improve fit
logo_height	Change the logo size height css to improve fit

Value

a header html shiny object

Examples

```
if (interactive()) {  
  
  ui <- fluidPage(  
    shinyGovstyle::header(  
      main_text = "Example",  
      secondary_text = "User Examples",  
      logo="shinyGovstyle/images/moj_logo.png")  
    )  
  
  server <- function(input, output, session) {}  
  
  shinyApp(ui = ui, server = server)  
}
```

heading_text

Heading Text Function

Description

This function create a heading text

Usage

```
heading_text(text_input, size = "xl", id)
```

Arguments

text_input	Text to display
size	Text size using xl, l, m, s. Defaults to xl.
id	Custom header id

Value

a heading text html shiny object

Examples

```
if (interactive()) {  
  ui <- fluidPage(  
    shinyGovstyle::header(  
      main_text = "Example",  
      secondary_text = "User Examples",  
      logo="shinyGovstyle/images/moj_logo.png"),  
  )  
}
```

```

    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::heading_text("This is great text", "m")
    ),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}

```

input_field

Input Field Function

Description

This function inserts number of text inputs. Useful for addresses.

Usage

```

input_field(
  legend,
  labels,
  inputIds,
  widths = NULL,
  types = "text",
  error = FALSE,
  error_message = NULL
)

```

Arguments

legend	Legend that goes above the fieldset
labels	A list of labels for the text inputs
inputIds	A list input slots that will be used to access the value.
widths	control the size of the box based on number of characters required. Options are 30, 20, 10, 5, 4, 3, 2. NULL will not limit the size
types	text box types. Will default to text.
error	Whenever to icnlud error handling Defaults to FALSE.
error_message	Message to display on error. Defaults to NULL

Value

a input field of html as a shiny object

Examples

```

if (interactive()) {

  ui <- fluidPage(
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::input_field(
        legend ="List of three text boxes in a field",
        labels = c("Field 1", "Field 2", "Field 3"),
        inputIds = c("field1", "field2", "field3"),
        widths = c(30,20,10),
        error = TRUE),
      # Button to trigger error
      shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
    ),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {
    # Trigger error on blank submit of field2
    observeEvent(input$submit, {
      if (input$field2 == ""){
        shinyGovstyle::error_on(inputId = "field2",
          error_message = "Please complete")
      } else {
        shinyGovstyle::error_off(
          inputId = "field2")
      }
    })
  }
  shinyApp(ui = ui, server = server)
}

```

insert_text

Insert Text Function

Description

This function loads the insert text component to display additional information in a special format.

Usage

```
insert_text(inputId, text)
```

Arguments

inputId	The input slot that will be used to access the value.
text	Text that you want to display on the insert

Value

a insert text html shiny object

Examples

```
if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::insert_text(
        inputId = "note",
        text = "It can take up to 8 weeks to register a lasting power of
          attorney if there are no mistakes in the application."
      )
    ),
    shinyGovstyle::footer(full = TRUE)
  )
  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}
```

 label_hint

Label with Hint Function

Description

This function inserts a label and optional hint

Usage

```
label_hint(inputId, label, hint_input = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
hint_input	Display hint label for the control, or NULL for no hint label.

Value

a label hint html shiny object

Examples

```
if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      label_hint(
        inputId = "label1",
        label = "This is a label",
        hint_input = "This is a hint")
      ),
    shinyGovstyle::footer(full = TRUE)
  )
  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}
```

 layouts

Page Layout Functions

Description

These function loads the page layout in a gov layout. There is a selection of components that can sit within each other. The `gov_main_layout` is the overarching layout. The `gov_row` creates a each row and `gov_box` creates a box within the row. The `gov_text` is a container for text bodies.

Usage

```
gov_main_layout(..., inputID = "main")
```

```
gov_row(...)
```

```
gov_box(..., size = "full")
```

```
gov_text(...)
```

Arguments

<code>...</code>	include the components of the UI that you want within the main page. These components are made to flow through each other. See example
<code>inputID</code>	ID of the main div. Defaults to "main"

size size of the box in the row. Optional are full, one-half, two-thirds, one-third and one-quarter. Defaults to "full"

Value

a html shiny layout div

Examples

```
if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_main_layout(
      shinyGovstyle::gov_row(
        shinyGovstyle::gov_box(
          size = "full",
          shinyGovstyle::gov_text("govuk-grid-column-full")
        )
      ),
      shinyGovstyle::gov_row(
        shinyGovstyle::gov_box(
          size = "one-half",
          shinyGovstyle::gov_text("govuk-grid-column-one-half")
        ),
        shinyGovstyle::gov_box(
          size = "one-half",

        ),
        shinyGovstyle::gov_box(
          size = "two-third",
          shinyGovstyle::gov_text("govuk-grid-column-two-third")
        )
      ),
      shinyGovstyle::gov_row(
        shinyGovstyle::gov_box(
          size = "one-quarter",
          shinyGovstyle::gov_text("govuk-grid-column-one-quarter")
        ),
        shinyGovstyle::gov_box(
          size = "three-quarters",
          shinyGovstyle::gov_text("govuk-grid-column-three-quarters")
        )
      )
    )
  )
},
```

```

    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}

```

noti_banner

Notification Banner Function

Description

This function create a notification banner

Usage

```

noti_banner(
  inputId,
  title_txt = "Important",
  body_txt = NULL,
  type = "standard"
)

```

Arguments

inputId	The input id for the banner
title_txt	The wording that appears in the title
body_txt	The wording that appears in the banner body
type	The type of banner. Options are standard and success. Standard is default

Value

a notification html shiny object

Examples

```

if (interactive()) {

  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::noti_banner(
      inputId = "banner", title_txt = "Important", body_txt = "Example text")
  )

  server <- function(input, output, session) {}
}

```

```

  shinyApp(ui = ui, server = server)
}

```

panel_output	<i>Panel output</i>
--------------	---------------------

Description

This function inserts a panel. Normally used for confirmation screens

Usage

```
panel_output(inputId, main_text, sub_text)
```

Arguments

inputId	The input slot that will be used to access the value.
main_text	Add the header for the panel
sub_text	Add the main body of text for the panel

Value

a panel html shiny object

Examples

```

if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "full",
      shinyGovstyle::panel_output(
        inputId = "panel1",
        main_text = "Application Complete",
        sub_text = "Thank you for submitting your application.
                    Your reference is xvsiq")
      ),
    shinyGovstyle::footer(full = TRUE)
  )
  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}

```

radio_button_Input *Radio Button Function*

Description

This function create radio buttons

Usage

```
radio_button_Input(
  inputId,
  label,
  choices = NULL,
  selected = NULL,
  inline = FALSE,
  small = FALSE,
  choiceNames = NULL,
  choiceValues = NULL,
  hint_label = NULL,
  error = FALSE,
  error_message = NULL,
  custom_class = ""
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Input label.
choices	List of values to select from (if elements of the list are named then that name rather than the value is displayed to the user)
selected	The initially selected value.
inline	If you want the radio inline or not, Default is FALSE
small	If you want the smaller versions of radio buttons, Default is FALSE
choiceNames, choiceValues	Same as in checkboxGroupInput . List of names and values, respectively, that are displayed to the user in the app and correspond to the each choice (for this reason they must have the same length). If either of these arguments is provided, then the other must be provided and choices must not be provided. The advantage of using both of these over a named list for choices is that choiceNames allows any type of UI object to be passed through (tag objects, icons, HTML code, ...), instead of just simple text.
hint_label	Additional hint text you may want to display below the label. Defaults to NULL
error	Whenever you want to include error handle on the component.
error_message	If you want a default error message.
custom_class	If you want to add additional classes to the radio buttons

Value

radio buttons html shiny object

Examples

```

if (interactive()) {

  ui <- fluidPage(
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      #Simple radio
      shinyGovstyle::radio_button_Input(
        inputId = "radio1",
        choices = c("Yes", "No", "Maybe"),
        label = "Choice option"),
      # Error radio
      shinyGovstyle::radio_button_Input(
        inputId = "radio2",
        choices = c("Yes", "No", "Maybe"),
        label = "Choice option",
        hint_label = "Select the best fit",
        inline = TRUE,
        error = TRUE,
        error_message = "Select one"),
      # Button to trigger error
      shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
    ),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {
    #Trigger error on blank submit of eventId2
    observeEvent(input$submit, {
      if (is.null(input$radio2)){
        shinyGovstyle::error_on(inputId = "radio2")
      } else {
        shinyGovstyle::error_off(
          inputId = "radio2")
      }
    })
  }
  shinyApp(ui = ui, server = server)
}

```

`run_example`*Example Function*

Description

This function runs a shiny example using different parts of the package

Usage

```
run_example()
```

Value

a shiny app with examples in

Examples

```
if (interactive()) {  
  run_example()  
}
```

`select_Input`*Select Function*

Description

This function inserts a select box

Usage

```
select_Input(inputId, label, select_text, select_value)
```

Arguments

<code>inputId</code>	Input id for the component
<code>label</code>	Insert the text for the label.
<code>select_text</code>	Add the text that will apply in the drop down as a list
<code>select_value</code>	Add the value that will be used for each selection.

Value

a select input html shiny object

Examples

```

if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "full",
      select_input(
        inputId = "sorter",
        label = "Sort by",
        select_text = c("Recently published",
                       "Recently updated",
                       "Most views",
                       "Most comments"),
        select_value = c("published", "updated", "view", "comments")),
        tags$br()
      ),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}

```

skip_to_main

Skip to main content link

Description

This function generates an accessible 'Skip to main content' link, which is typically used by keyboard-only users to bypass content and navigate directly to the main content of a page. Important: your main column will need an id of "main_col" for this to work

Usage

```
skip_to_main()
```

Value

a skip button that skips to section with id of "main_col"

Examples

```

if (interactive()) {
  ui <- fluidPage(
    cookieBanner("Run Example"),
    skip_to_main(),
    shinyGovstyle::header(

```

```

    main_text = "Example",
    secondary_text = "User Examples",
    logo="shinyGovstyle/images/moj_logo.png"
  ),
  shinyjs::useShinyjs(), # shinyjs is needed to manage visibility of elements
  gov_row(
  shiny::column(
  width = 3,
  id = "nav",

# Contents box
  shiny::tags$div(
    id = "govuk-contents-box", #DO NOT REMOVE ID
    class = "govuk-contents-box", #DO NOT REMOVE CLASS
    shiny::tags$h2("Contents"),
    p("Your contents links go here"),
  )
),

shiny::column(
width = 9,
id = "main_col",
shiny::tabsetPanel(
  type = "hidden",
  id = "tab-container", # DO NOT REMOVE ID
  shiny::tabPanel(
    "Your main content",
    value = "your_main_content",
    gov_layout(
      size = "two-thirds",
      heading_text("Your main content", size = "l"),
      heading_text("accordions", size = "s"),
      shinyGovstyle:: accordion(
        "acc1",
        c("Writing well for the web",
          "Writing well for specialists",
          "Know your audience",
          "How people read"
        ),
        c("This is the content for Writing well for the web.",
          "This is the content for Writing well for specialists.",
          "This is the content for Know your audience.",
          "This is the content for How people read."
        )
      )
    )
  )
)
)
)
)
server <- function(input, output, session){

```

```

    }
    shinyApp(ui = ui, server = server)
  }

```

tag_Input

Tag Function

Description

This function creates a tag

Usage

```
tag_Input(inputId, text, colour = "navy")
```

Arguments

inputId	The id to access the tag
text	The text in the tag
colour	The colour of the tag. Default is navy. Other options are grey, green, turquoise, blue, purple, pink, red, orange and yellow

Value

a tag html shiny object.

Examples

```

if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::tag_Input("tag1", "Complete"),
      shinyGovstyle::tag_Input("tag2", "Incomplete", "red")),
    shinyGovstyle::footer(full = TRUE)
  )

  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}

```

text_area_Input	<i>Text Area Input Function</i>
-----------------	---------------------------------

Description

This function create a text area input

Usage

```
text_area_Input(  
  inputId,  
  label,  
  hint_label = NULL,  
  row_no = 5,  
  error = FALSE,  
  error_message = NULL,  
  word_limit = NULL  
)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
hint_label	Display hint label for the control, or NULL for no hint label.
row_no	Size of the text entry box. Defaults to 5.
error	Whenever to icnlud error handling Defaults to FALSE
error_message	Message to display on error. Defaults to NULL
word_limit	Add a word limit to the display. Defaults to NULL.

Value

a text area box html shiny object

Examples

```
text_area_Input("taId", "Can you provide more detail?",  
"Do not include personal or financial information, like your  
National Insurance number or credit card details.")
```

`text_Input`*Text Input Function*

Description

This function create a text area input

Usage

```
text_Input(  
  inputId,  
  label,  
  hint_label = NULL,  
  type = "text",  
  width = NULL,  
  error = FALSE,  
  error_message = NULL,  
  prefix = NULL,  
  suffix = NULL  
)
```

Arguments

<code>inputId</code>	The input slot that will be used to access the value.
<code>label</code>	Display label for the control, or NULL for no label.
<code>hint_label</code>	Display hint label for the control, or NULL for no hint label.
<code>type</code>	Type of text input to accept. Defaults to text.
<code>width</code>	control the size of the box based on number of characters required. Options are 30, 20, 10, 5, 4, 3, 2. NULL will not limit the size
<code>error</code>	Whenever to include error handling Defaults to FALSE.
<code>error_message</code>	Message to display on error. Defaults to NULL
<code>prefix</code>	Add a prefix to the box. Defaults to NULL
<code>suffix</code>	Add a suffix to the box. Defaults to NULL

Value

a text input html shiny object

Examples

```
## Only run examples in interactive R sessions  
if (interactive()) {  
  
  ui <- fluidPage(  
    # Required for error handling function
```

```

shinyjs::useShinyjs(),
shinyGovstyle::header(
  main_text = "Example",
  secondary_text = "User Examples",
  logo="shinyGovstyle/images/moj_logo.png"),
shinyGovstyle::banner(
  inputId = "banner", type = "beta", 'This is a new service'),
shinyGovstyle::gov_layout(size = "two-thirds",
  # Simple text box
  shinyGovstyle::text_Input(inputId = "eventId", label = "Event Name"),
  # Error text box
  shinyGovstyle::text_Input(
    inputId = "eventId2",
    label = "Event Name",
    hint_label = "This can be found on the letter",
    error = TRUE),
  # Button to trigger error
  shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
),
shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {
  #Trigger error on blank submit of eventId2
  observeEvent(input$submit, {
    if (input$eventId2 != ""){
      shinyGovstyle::error_off(inputId = "eventId2")
    } else {
      shinyGovstyle::error_on(
        inputId = "eventId2",
        error_message = "Please complete")
    }
  })
}

# Run the application
shinyApp(ui = ui, server = server)
}

```

value_box

Create a value text box with optional description and colour

Description

This function generates a value text box with an optional description and customisable colour. The text box can be used in Shiny applications to display highlighted information, such as statistics or key metrics.

Usage

```
value_box(inputId, value = "your value goes here", text = NA, colour = "blue")
```

Arguments

inputId	Character. A unique identifier for the value box element.
value	Character. The primary value to display in the value box. Defaults to "your value goes here".
text	Character or NA. An optional description to appear below the value. If not provided (default is NA), the description will not be displayed..
colour	Character. A colour to apply to the value box. Defaults to "blue". Choose from the following: "grey", "purple", "turquoise", "blue", "light-blue", "yellow", "orange", "red", "pink", or "green".

Value

A Shiny ‘div’ tag representing the value box, styled according to the specified parameters.

Examples

```
if (interactive()) {
  ui <- fluidPage(
    value_text(
      inputId = "value1",
      value = "1,000,000",
      text = "This is the latest value for the selected inputs.",
      colour = "purple"
    )
  )
  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}
```

 warning_text

Warning Text Function

Description

This function create warning text

Usage

```
warning_text(inputId, text)
```

Arguments

inputId	The input slot that will be used to access the value.
text	Text that goes in the main

Value

a warning box html shiny object

Examples

```
if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::warning_text(
        inputId = "warn1",
        text = "You can be fined up to £5,000 if you do not register.")
    ),
    shinyGovstyle::footer(full = TRUE)
  )
  server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}
```

word_count

Word Count Function

Description

This function create tracks the word count and should be used with the text area function

Usage

```
word_count(inputId, input, word_limit = NULL)
```

Arguments

inputId	The input slot of the text area that you want to affect
input	The text input that is associated with the box.
word_limit	Change the word limit if needed. Default will keep as what was used in text area component

Value

no value returned. Updates the word count in a shiny app

Examples

```
if (interactive()) {

  ui <- shiny::fluidPage(
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      "Justice", "", logo="shinyGovstyle/images/moj_logo.png"),
    gov_layout(size = "full",
      text_area_Input(
        inputId = "text_area",
        label = "Can you provide more detail?",
        hint_label = "Do not include personal or financial information
          , like your National Insurance number or credit
          card details.",
        word_limit = 300)
      ),
    footer(TRUE)
  )

  server <- function(input, output, session) {
    shiny::observeEvent(input$text_area,
      word_count(inputId = "text_area",
        input = input$text_area
      )
    )
  }
  shinyApp(ui = ui, server = server)
}
```
